

Eco-Contemporary Style

LOCATION: WOLFORD RD, ST PETERSBURG, FL

CLIENT: APPLE TREE DEVELOPERS

PANORAMIC VIEW

This project development introduces a fresh and modern aesthetic to residential architecture, combining clean lines, expansive windows, and a bold mix of textures. The façades blend warm wood tones, crisp white elements, and vibrant green walls, creating a striking visual identity. Vertical black framing details add structure and sophistication to the overall look.

Designed with lifestyle in mind, the project features private rooftop terraces that offer expansive views and outdoor living spaces for relaxation or entertainment.

Sense of privacy

Large balconies and generous glazing enhance the sense of openness, inviting natural light into every unit. These elements support both privacy and community interaction within the building.

The layout prioritizes both functionality and style, with integrated garages and efficient parking solutions seamlessly incorporated into the design.

Each unit enjoys direct access, maximizing convenience for residents while maintaining a sleek, cohesive exterior. The thoughtful orientation of units allows for optimal light and ventilation throughout.

Sustainability is subtly embedded in the project, with green walls adding not just visual appeal but also environmental benefits such as insulation and air quality improvement. Combined with contemporary design principles, this development exemplifies the fusion of modern architecture and smart urban living.
